*Amendments*

*In the Claims:*

Please substitute the following claim 1 for the pending claim 1:

---

1. (Twice Amended) A method of expressing an exogenous gene in a mammalian cell, said method comprising:

- Q 1
- a) introducing into a mammal comprising said cell a baculovirus the genome of which comprises said exogenous gene; and
  - b) maintaining said cell under conditions such that said exogenous gene is expressed.
- 

Please add the following claims:

27. (New) The method of claim 1, wherein the baculovirus is a nuclear polyhedrosis virus.

G 2

28. (New) The method of claim 27, wherein the nuclear polyhedrosis virus is an *Autographa californica* virus.

29. (New) The method of claim 1, wherein said genome lacks a functional polyhedron gene.

30. (New) The method of claim 1, wherein said genome further comprises a promoter of a long-terminal repeat of a transposable element.

31. (New) The method of claim 1, wherein said genome further comprises a promoter of a long-terminal repeat of a retrovirus.

Q 2 32. (New) The method of claim 31, wherein said retrovirus is a Rous Sarcoma Virus.

33. (New) The method of claim 1, wherein said genome further comprises a polyadenylation signal and an RNA splicing signal.

34. (New) The method of claim 1, wherein said genome further comprises a cell-type-specific promoter.

35. (New) The method of claim 1, wherein said cell is a hepatocyte.

36. (New) The method of claim 1, wherein said mammal is a human.
